

Automatic File Sorter

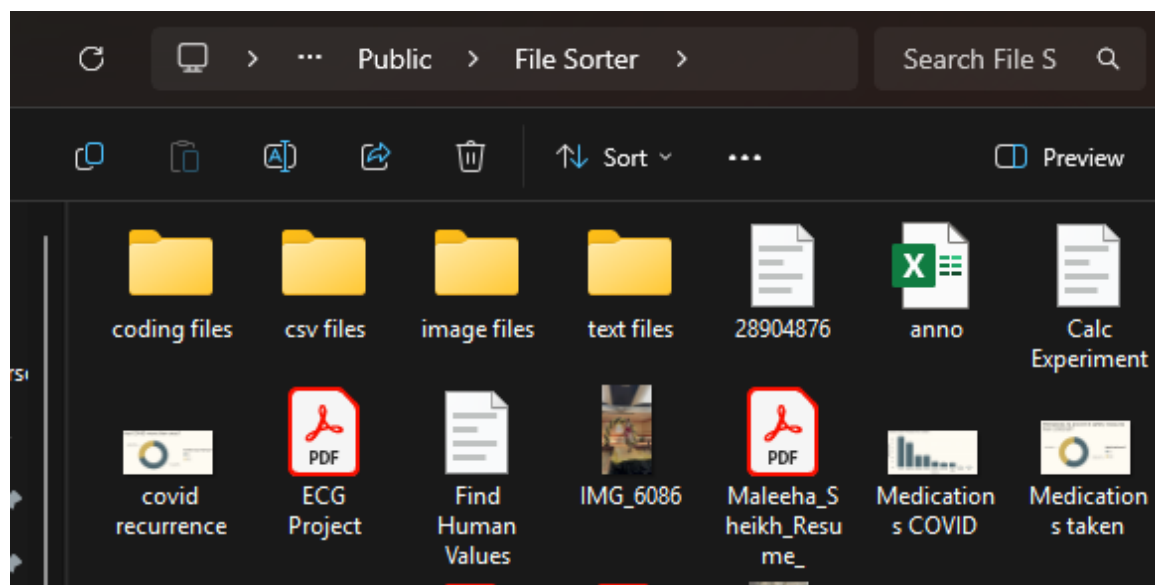

This project is done to sort files in file-explorer. I have added some small comments in the notebook, for better understanding and to avoid errors.

Copying and checking the Folder I wished to sort out:

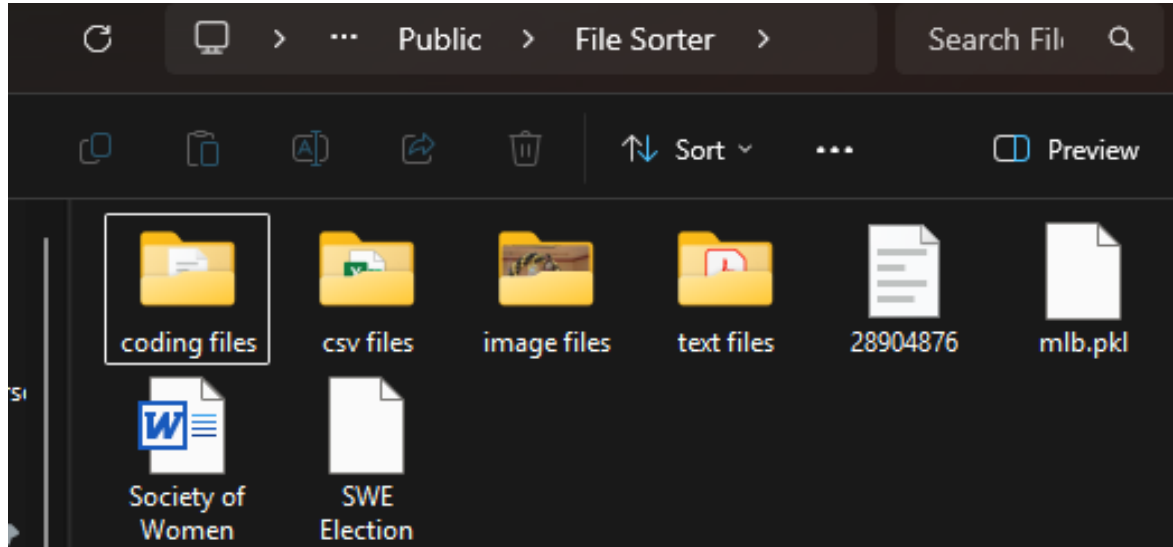

Made new folders for sorting out the files:

```
C:/Users/Public/File Sorter/csv files
C:/Users/Public/File Sorter/image files
C:/Users/Public/File Sorter/text files
C:/Users/Public/File Sorter/coding files
```

Files were sorted into each respective file type to the designated folders, undefined file types remained outside:

```
There are files in this path that were not moved!  
There are files in this path that were not moved!  
There are files in this path that were not moved!  
There are files in this path that were not moved!
```

You can check the sorted folders to see if the correct files were sorted:
